

Transplanting *your* Seedlings

Follow these simple instructions, and you'll have a successful herbal garden in no time! Please, follow us on Instagram, Facebook, Twitter, and our website <https://dyckmanfarmhouse.org/> for video instructions and recipes!

1 Add potting soil

Add 2 layers of organic potting soil and 1 layer of organic compost.

2 Measure the height

The height of your roots determines the height of the hole in the soil.

3 Transplant the sprout

Dig a hole as deep as the height of the roots and transplant.

4 Mark space

Seedlings are away from each other and the edge of the container.

5 Dig a second hole

On one mark, dig a new hole.

6 Transplant the sprout

Transplant your second seedling.

7 Plant the sprout

Repeat the step to transplant your third seedling.

8 Ready!

Seedlings need full sun and water every day! Place on your windowsills or fire escapes.
